EDUCATION

Case Western Reserve University

Cleveland, OH

B.S. in Computer Science & B.S. in Data Science (CS GPA: 4.0 | Cumulative: 3.82)

Dec. 2025

M.S. in Computer Science

Expected Dec. 2027

- **Minors:** Business Administration, Statistics, Mathematics
- **Honors & Awards:** CWRU Grant, Dean's List (All Semesters), Cum Laude, Chairman's Award
- **Related Coursework:** Java Object Oriented Programming, Data Structures & Algorithms, Data Science, Database Systems, Data Engineering, AI & Machine Learning, Operations Management & Supply Chain, Negotiation, Linux Operating System

EXPERIENCE

Pointe Blank Solutions

Remote

Software Engineer

Dec. 2025 – Present

- Designed and shipped a case management chronology streamlined board by implementing a new data model layer and schema in .NET on SQL Server, verified through SSMS, utilizing **RPC commands**, composable domain APIs, and a change tracking process with Hangfire Jobs, integrated with a personalized LLM assistant for action-driven recommendations.
- Collaborated to deliver calendar synchronization integrating users' **Microsoft Outlook** calendar entries with an internal appointment module, unifying reminder notifications and calendar source attribution.
- Migrated legacy client database records into a **unified SQL Server** schema on Amazon RDS using T-SQL transformation scripts and validation queries, ensuring semantic equivalence and achieving 95% semantic equivalence for 10K+ cases.
- Led functional reviews and built an internal **MCP server** to standardize requests and responses across repositories, submodules, databases, and proprietary APIs, enabling a **multi-agent system** with specialized tools for domain-specific tasks.
- Diagnosed and resolved live reported production incidents by tracing build failures across TeamCity, Seq, and Azure DevOps pipelines, improving mean resolution time by 25% and improving system uptime.

FPT Software

New York, NY

Software Engineer Intern

June 2024 – Aug. 2024

- Designed and led a team to build a hybrid fan-out data read & write architecture for home timelines based on **load parameters**, ensuring **serializable transactions** using **Java Spring Data Redis**, Hibernate ORM, and **PostgreSQL** achieving a median response time under 4 seconds at 300K+ requests/sec.
- Coordinated directly with **client engineers** to build a lightweight, role-based access **client-facing API gateway** using **Python FastAPI** and **Swagger UI** for campaign analytics and on-demand status responses hosted on AWS EC2 with automated endpoint documentation, reducing unresolved customer request bottlenecks by 35%.

Rakuna Co.

San Francisco, CA

Software Engineer Co-op

May 2023 – Dec. 2023

- Cooperated with Product Designer and Tester on three phases of CRM production release, contributing to 15% feature implementation and bug fix while utilizing **Agile Development**, Confluence, Jira, and Bitbucket.
- Reconstructed Interview Scheduling email templates using **Embedded Ruby** and **JavaScript** to improve frontend UI by 50%.
- Improved readability and scalability of Interview Scheduling mailer MVC model by practicing modular programming and object-oriented design patterns with **RESTful API** calls while utilizing **SendGrid**, **Sidekiq**, and **Redis**.
- Redesigned Form Validation schema and optimized Prospect search engine using **React**, **Yup**, and **ElasticSearch** to increase form usability and autocomplete search performance, resulting in a decrease in form completion time of 72%.

LEADERSHIP & ACADEMIC INVOLVEMENTS

CWRU's Department of Computer and Data Sciences

Cleveland, OH

Course Consultant & Researcher

Aug. 2023 – Dec. 2025

- Implemented existing explainability methods using **Python** for **Graph Neural Networks (GNN)** from published papers, applied them to various datasets, and automated the comparative analysis process to enhance evaluation speed by 30%.
- Collaborated with faculty and conducted office hours to develop course materials and grading frameworks for **Java Data Structures & Algorithms**, **Linux**, and **Database** classes, exceeding course evaluation expectations for positive feedback.

Crypto – Blockchain Trading Simulation Platform | Data Processing and Web Application

Feb. 2024

- Leading team development of an AI-powered crypto trading simulation platform integrating **Kafka** for live data streams and **Apache Airflow** for dataflow management, using data from Crypto Compare APIs and **LSTM** models for predictive analytics.
- Constructing **Python** infrastructure with **Flask** & **Node.js**, employing **MongoDB** for TTL indexes & time-series data, and deploying on Google Cloud Platform, **Confluent Cloud**, and **Docker** containers for seamless portability and accessibility.

CWRU Hub – Event-Based Social Discovery Matching Platform

Aug. 2023 – Dec. 2025

- Led an engineering team to build a full-stack social platform for 5,000+ students, iterating directly with student organizations to launch peer matching and boost campus event attendance by 30% (Hackathon winner).
- Integrated **LangChain** with LLM tool calling to analyze mutual interests upon user matches, retrieve relevant events from CWRU's public community engagement APIs, and **synthesize** personalized event recommendations and groupings.

Other: CWRU Hacker Society Vice President, Student Council Class Representative, Department Musical & Theater Club Board Member

TECHNICAL SKILLS

Languages: Java, Python, C#, Ruby, C, TypeScript, JavaScript

Frameworks & Libraries: Spring Boot, Ruby on Rails, FastAPI, .NET, Node.js, PyTorch, TensorFlow, LangChain, React, AngularJS, Tailwind CSS, Airflow, Selenium

Data & Infra: Git, Jira, Bitbucket, Confluence, Azure, Postman, Vault, Consul, Trello, Agile/Scrum, Amazon Web Services (EC2, S3, Lambda, RDS, DynamoDB), Google Cloud Platform (Cloud Run, BigQuery, GCE, GCS)
